

## DIY, Budget-Friendly Air Purifier

Indoor air pollution—particularly from the chemicals acrolein and arsenic—can lead to bladder cancer in both humans and dogs. Air purifiers with HEPA filters are more effective at cleaning indoor air pollution than any other kind of device, but they can be expensive (even up to \$1,000). We love this budget-friendly option for removing dust, pollen, chemicals, smoke, dander, and more.

20-inch box fan

20x20-inch pleated white furnace/HVAC air filter (MERV-13 rating)

Clear packing tape

1. Place the air filter squarely against the back of the fan.
2. Use the packing tape to secure the filter to the fan, on all sides, making sure there are no gaps.
3. Turn on the fan.
